

## CONTINUOUS DATA PROTECTION (CDP)

### BECAUSE ONE BACKUP PER DAY IS NOT ENOUGH !

A laptop is stolen every 7 seconds around the world... 70% of a company's strategic data is stored on managers' laptops... 50% of field representatives have no protection against the loss of their data, although 80% of their data is stored on their laptops...

(Source : IDC International Data Corporation)

### A CONTINUOUS BACKUP OF YOUR DATA SAVES TIME

The CDP solution offered by DFi Service is a simple, reliable way of real-time backup, designed for servers, user PC's, and laptops using Windows.

### AN IMMEDIATE BACKUP WITH FILE JOURNALING

The CDP software archives your most important files in real time the moment you save them.

The software stores your data simultaneously on your local computer and the CDP server ; in case the server is unavailable, the files are put on standby and sent as soon as the connection is available again.

CDP stores successive versions of the file, continuously replacing older versions with the newest one.

### DIRECT ACCESS TO FILES, SIMPLE RECOVERY BY THE USER

You can recover your files without the intervention of an administrator, thanks to the easily accessible interface and assistance.

### EASY INSTALLATION, NO MATERIAL INVESTMENT, AND OPTIMAL SECURITY

Your data is saved on a server via a secure internet connection. No one can intercept your data, only the program installed on your computer allows a remote connection to the server. You can also choose an option to encrypt your data.

#### Your advantages

- Proven performance and efficiency •
- Secure real-time backup •
- Installation and configuration in only minutes •
- Autonomous and intuitive file recovery •
- Secure connection •

## Working environment

- Secure connection via SSL
- Only the CDP software can access the server
- Storage of data in a highly secure data center
- Compatible with most Internet accesses : HTTPS protocol
- Surveillance and recovery of services 24h/24h, 365 days
