

VOXCOM

FROM TELEPHONE TO VIRTUAL DESKTOP

For businesses, IP telephony is an excellent alternative to traditional telephone lines. This innovative and practical solution simplifies the structure of your network, allowing the convergence of voice, internet and computer software. Although preserving your current phone lines, it allows you to multiply functionalities and secure your communications. Whether your employees are at home or travelling, they can log in to the company infrastructure with their PC or phone, thus maintaining the same working environment.

Your advantages

- Advanced telephony functions •
- Warranty and service included •
- Attractive cost •

Why choose Voxcom ?

Increase your productivity :

- The workplace becomes virtual; it can be accessed from the office, from a subsidiary, or from home
- Simplification of the network: only one plug for both the computer and the phone
- Simplicity in installation and modification
- Customization of your telecommunications with a personalized concept and options
- Unlimited number of users
- Solutions that can be adapted to any business or infrastructure.

Increase efficiency and security :

- Conserve your working environment even when working from the road or from home (phone, fax, e-mail, desktop)
- Complete integration of subsidiaries and remote sites to the company network
- Unified mailbox that combines fax, e-mail, and voice messages
- Securing of telephone equipment and software on IP.

Rationalize costs :

- No investment as the service is outsourced
- Free communication between users within the company (including remote sites)
- Cost corresponding to the exact number of users
- No maintenance fees.

When to choose this service ?

- When you need to modify or extend your phone central
- When you move or open another subsidiary
- When you need to centralize data and the exchanges between multiple remote sites
- When you wish to secure the traffic of your company communications
- When you seek to modernize your infrastructure and prepare for the future.

two networks separated

a single network !
